

NIMCO KADAR AHMED

ICT Learner Support Intern | Cybersecurity & Digital Forensics Student

Kenya | [+254725547776] | [nimokhadar6@gmail.com] | GitHub: github.com/Nimokhadar

PROFESSIONAL PROFILE

Motivated university student studying Cyber Security and Digital Forensics with a strong interest in ICT support and learner assistance. I have practical knowledge of Linux, computer networking, Bash scripting, web technologies and cyber security fundamentals. Although I have not held a formal ICT support position, my teaching experience has developed my patience, communication and ability to guide learners step by step. I am eager to apply these skills in a remote learner-support role and develop practical ICT support experience.

EDUCATION

Open University of Kenya

Bachelor's Degree in Cyber Security and Digital Forensics — Current Student

- Relevant learning: Linux, networking, cybersecurity, digital forensics, Bash scripting, web technologies and computer systems
- Student at IC DFA pursuing cybersecurity.

Secondary Education

Hilaac Secondary School — Completed secondary education

RELEVANT TECHNICAL SKILLS

- Linux operating systems and command-line operations
- Basic computer and network troubleshooting
- Computer networking fundamentals and IP addressing
- Bash scripting and Linux system investigation
- HTML and CSS fundamentals
- Cybersecurity fundamentals and authorised laboratory testing
- Web application and network reconnaissance concepts
- Microsoft Office and Google Workspace
- Email communication and remote digital support

TEACHING & LEARNER SUPPORT EXPERIENCE

Teacher / Learner Support — Teaching experience

- Explained lessons and answered learners' questions using clear and simple language.
- Guided learners through tasks step by step and encouraged them to ask questions.
- Developed patience and communication skills when supporting learners with different levels of understanding.
- Helped learners identify difficulties and understand practical solutions.
- Built positive and respectful communication skills through regular interaction with learners.

TECHNICAL TRAINING & PROJECTS

Bash Scripting – Reconnaissance Tool — Academic cybersecurity laboratory

- Built and tested a Bash-based reconnaissance tool in an authorised laboratory environment.
- Practiced Linux command-line operations and Bash scripting.
- Used Nmap, WhatWeb and DIRB as part of controlled lab exercises.
- Documented technical results and practiced troubleshooting scripts and commands.

Linux & Networking Practical Learning

- Practiced Linux file systems, users, groups, permissions, storage and system information commands.
- Investigated network interfaces, addressing, routes and listening services in controlled environments.
- Developed practical problem-solving skills through guided technical laboratories.

VIRTUAL ASSISTANT TRAINING

Virtual Assistant Training — Completed

- Email management and professional communication
- Administrative support and task organisation
- Time management and remote working
- Following instructions and responding professionally to users

LEARNER SUPPORT APPROACH

When supporting a learner who cannot access the E-Campus Portal, I would first listen carefully and identify the exact problem. I would guide the learner through appropriate basic checks such as internet connectivity, the portal address, browser issues and the official password-recovery process. I would never ask the learner to share a password or other sensitive credentials. If the issue required technical intervention beyond my role, I would record the relevant non-sensitive details and escalate the matter to the appropriate ICT support team.

PROFESSIONAL STRENGTHS

- Clear and patient communication
- Learner-focused support
- Problem-solving and troubleshooting
- Willingness to learn new systems
- Professional and respectful attitude
- Remote communication and organisation

AVAILABILITY

15–20 hours per week | Remote | Flexible around university studies

PORTFOLIO

GitHub: <https://github.com/NIMOKHADAR>

Practical technical and cybersecurity learning are available on my GitHub profile.
